

How many hours a week do you study math?

How many hours a week do you study in the MPS tutoring center?

In the MPS center possibly list the math subjects the tutors are well versed in that way they could help more efficiently with what math course students need help with.

Thank you for the extra support.

I have struggled my whole life with math and have failed multiple classes over and over again. MPS helped me get the tools i need to pass and worked at the pace I needed

The MPS program helped me a lot.

It's great never took any math class as comprehensible. I suck at math but this class helped me

Instead of focusing on lecturing the entire textbook or going by textbook style, why not just teach parts of each chapter that would actually be helpful in reality. Lectures tend to get really boring and the energy in the classroom doesn't keep people's attention long enough. More group work should be assigned. Exams should be limited to only 2 chapters at most for the most success.

It's a great class.

Extended MPS hours

Everything is good

Mr Stachnick is the best

Thanks for having it

Great program! Provides lots of help

I think the program is great and I think we needed more in class tutoring.

Include homework time during class time so we could go over questions while tutors and proffers are here. We had tutors in class but they wouldn't do much because Mr.S was lecturing.

I appreciate the help

Khoa is an amazing counselor. He is always on top of us because he wants us to pass this class and have a successful future. He is always asking questions to Every student. He helps us register and gives us the best advice.

Hopefully MPS can be for more math classes in the future, and maybe do mindfulness on wednesays?
Its the middle of the week so people might be more stressed

Great program

Its a great program for any student that would like to be successful in math

During this quarter I have been able to improve in math and actually understand. I hope that sometime in the near future MPS would extend to math 1a, 1b, etc. It would also be beneficial to offer a program like this for science classes.

Perfect

Great work. I used to dislike math, now I am enjoying and learning it well. Thank you.

To get MPs for math 12.

Help with better studying habita

I have not been the best at math growing up, but this program really makes me feel comfortable in my environment and I think this is the best math grade I have gotten in a long time in a math class.

No other comments or suggestions. Program is amazing!

So far, I believe the MPS program is well put together. I'm not particularly good at math or anything and was quite frankly very terrified of taking Math10 this quarter, but with all the resources provided, MPS program managed to make math enjoyable.

Ms Kelly is the Goat (greatest of all time), i'd forsure recommend ms kelly if anyone Needed to take stats!

My English is not good. Sometimes I can't understand what's the meaning of one's speaking if she or he speaks too fast

The program is wonderfully amazing

This program honestly helped me succeed in math for the first time in my college experience.

If at all possible, have at least one or two tutors in the MPS tutoring center when student attendance is high. I know this can be unpredictable each day, but perhaps gather the information from the sign-in sheet to determine the high volume times.

Teachers should only focus on certain material that will be useful in real life problems. Don't go over everything in the textbook because it's not necessary. Exams should only be on 2 chapters at most so students have better chance at passing. This class was slow and at times not worth being present

Please do MPS for business calc!

:)

Awesome tutors that are always there to help you and will work with you! I am very bad at math and stats seemed like a mountain that I could never climb. Putting in the hours and working with The tutors are the main reason why I am passing this class

MPS helped me greatly. I understood material in a more organized and relaxed manner

I enjoyed this quarter because I actually understand Math for once.

really care about student who needs help

Fatemeh is the best teacher

Love it program!

I wish teachers wouldn't just teach out of a textbook. Instead teach only the material that's important & that will help us in the real world. Not every page in each chapter is necessary. Also go slower when teaching the more difficult portions of this class

Keep up good work.

I think we need to have more group work because we've only done two things as a "group" and it didn't even seem as if we were working efficiently so maybe it should be directed a little better? As well as the tutors in class, they weren't used at all maybe only one or two times and nothing else. The point of them is to have them around to explain, I asked for help and they didn't know anything after asking in different ways and also they should be asking if we need the help too because some are too shy to ask for it and that's exactly why we are in the MPS program too. Something else that would help is different time for tutoring since it does conflict also. Also I think are class has gone a little too slow on the more easier things to understand but when it came to more difficult things we breezed by it and that's exactly where people start getting more confused and lost in so maybe pacing the work load better or consistently

I would really like it if we had group circulation/member switching that way we can actually meet people in the class and build connections

It is been very helpful for my success in math. I'm thankful for this opportunity.

I have some vision impairment that makes it difficult to discern low-contrast fine details. It would be completely FANTASTIC if we could have a room with whiteboards as opposed to chalkboards.

Wish you guys can provide it for business calc students
